

## **FIELD FACILITY/OPERATIONS ENGINEER (2) - HEAVY OIL**

**Due to continued growth, Bankers has new Field Facility/Operations Engineer positions open. These positions would be on a 28/28 day rotation. The ideal candidates will have an operational background either as an operator or have worked closely in an operational role as well as a number of years as a facility engineer.**

Reporting to the Technical Director in Albania, the successful candidates will be responsible for all facility and construction projects, from concept through to commissioning, as well as day to day operational engineering duties.

### **Primary Responsibilities**

- Full engineering, design, construction management, commissioning and troubleshooting for heavy oil, waterflood, future polymer flood, and future steam flood operations
- Responsible for all facility and construction work having 4 construction inspectors as direct reports
- Manage all facility and construction projects from conception through completion including new facilities, pipelines, SWB set ups, pump installs, civil construction, as well as maintenance and optimization of existing facilities
- Day to day operational engineering duties to support production operations
- On the spot decision making addressing operational needs and solving problems as well as crucial decisions on new construction projects
- Project management – liaising with the Senior Facilities Manager in Calgary
- Utilizing Canadian based EPCM's as needed and managing them
- Work closely with Operations, production, and drilling on current and future plans
- Liaise with Calgary Senior Facilities Manager on all projects and connect Albania and Calgary

### **Skills and Experience**

- 5+ years of varied heavy oil experience with the main focus on facilities and a preference given to those with a operational background either as an operator or having closely worked with operations
- B.Sc. in Petroleum Engineering or related engineering discipline. APEGA membership or equivalent required. Technologist must have a Diploma in Engineering Technology and be a Certified Engineering Technologist
- Heavy oil experience is a definite asset
- Must be fully capable of completing full facility engineering duties including concept, engineering, design, construction management, and commissioning/start-up
- Experience with waterflooding, polymer flooding, and/or steam flooding an asset

- Must understand process and production operations
- Must be able to read, understand and create drawings and P&ID's
- Field experience is an asset
- Must be able to handle a large number of projects in a fast paced environment
- Must be highly motivated and have the ability to work on your own with no direct mentorship or supervision
- International experience would also be an asset but not required
- Effective English verbal and written skills
- Team player used to working in a multi-disciplinary, multi-cultural environment
- Legally eligible to work in Albania without sponsorship

If you are interested in applying for this position, please submit your resume in confidence to: [hr@bankerspetroleum.com](mailto:hr@bankerspetroleum.com). Please note only candidates selected for an interview will be contacted. We thank all who apply for their interest in Bankers Petroleum.
